

I ask you to disregard this petition and trash it, there is absolutely no technical merit for this change! the two hams who submitted this petition have no desire to improve ham radio or to better any aspect of the hobby. these two and two others have a completely different agenda to slight a group of hams who they dislike!

their jamming and other malicious actions are overwhelming!

Regarding the topic of enhanced ssb audio, most of the problems are due to misused jargon. The majority of hams motivated to improve the quality of the ssb audio have done no obvious changes to their transmitters! all audio changes are done external to the radio. All radios are fcc type accepted and some can transmit 8khz wide!

the introduction of a more comfortable audio on ssb has excited many older long term hams, brought many new hams into the hobby and have introduced a new interest in the technical aspects of a transmitted audio signal! Experimenting and doing new things is ham radio. limiting with unnecessary rules will destroy ham radio. the present rules cover all what is being accomplished. We self police ourselves and you should not make a decision based upon two to four vindictive hams attacking a worldwide group of hams having fun, learning and enjoying the hobby

thank you
